This country snapshot presents detailed results of the **NOURISHING policy index** [1] for France. It highlights strengths and weaknesses in the design of national government nutrition policies. This snapshot supplements the policy index results with an in-depth look at the quality of policy design in each country. Full policy index results are outlined in the NOURISHING policy brief, which compares France to 29 other European countries.

## Main messages

- 1 France implements nutrition and diet-related policy actions in nine out of the ten policy areas of the NOURISHING framework. Two policy areas received a good assessment: limits or removal of specific nutrients in food products (I1) and increasing public awareness of healthy eating (I2). This was followed by a moderate assessment for nutrition label standards and regulations (N1), food standards in schools and other settings (O) and economic tools to address food affordability and purchase incentives (U).
- 2 Regulations on food availability within the vicinity of schools were missing, which had an impact on otherwise well-designed standards on school food and measures relating to sugar-sweetened beverage provision in schools (O). Important weaknesses were identified on increasing nutrition education skills (G) and on implementing unhealthy food and marketing restrictions to young people, for instance by targeting marketing in schools (R).
- 3 No policy action was identified at national level to create a healthier retail and food service environment (S), and only a poor assessment was achieved on ensuring food system coherence with health using supply chain actions (H). Greater action needs to be taken to strengthen these policy areas, as well as to improve nutrition education (G), offering counselling and assessment in healthcare settings (N2) and marketing restrictions to young people (R).

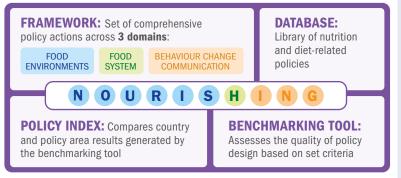

| Overview of policy status   | NO POLICIES IDENTIFIED   | POOR | FAIR | MODERATE | GOOD | EXCELLENT |  |
|---|--|------|------|----------|------|-----------|--|
| Nutrition label standards a   | MODERATE   |      |      |          |      |           |  |
| Offer healthy food and set standards in public institutions and other specific settings |  |      |      |          |      | MODERATE  |  |
| U Use economic tools to add   | Use economic tools to address food affordability and purchase incentives         |      |      |          |      |           |  |
| R Restrict food advertising a   | Restrict food advertising and other forms of commercial promotion                |      |      |          |      |           |  |
| Improve nutritional quality   | Improve nutritional quality of the whole food supply                             |      |      |          |      |           |  |
| S Set incentives and rules to   | Set incentives and rules to create a healthy retail and food service environment |      |      |          |      |           |  |
| H Harness supply chain and  | Harness supply chain and actions across sectors to ensure coherence with health  |      |      |          |      |           |  |
| Inform people about food  | Inform people about food and nutrition through public awareness                  |      |      |          |      |           |  |
| Nutrition advice and count  | Nutrition advice and counselling in healthcare settings                          |      |      |          |      |           |  |
| G Give nutrition education a  | Give nutrition education and skills  |      |      |          |      |           |  |

This snapshot is based on national level policies only. Policies issued by provincial, regional or local governments are outside the scope of this project.

## Methods

The NOURISHING policy index methods are fully explained in the associated **policy brief**. In short, the policy index combines values for a) policy presence, and b) policy design for 41 benchmarks.

The benchmarks are applied to policies in the **NOURISHING database** [2], collected through a comprehensive scan in 30 European countries, including France.

Policy tools used to produce the policy index results

Nutrition policy status in France
