4

This country snapshot presents detailed results of the **NOURISHING policy index** [1] for Malta. It highlights strengths and weaknesses in the design of national government nutrition policies. This snapshot supplements the policy index results with an in-depth look at the quality of policy design in each country. Full policy index results are outlined in the NOURISHING policy brief, which compares Malta to 29 other European countries.

## **Main messages**

- 1 Malta implements policy actions in nine out of ten policy areas of the NOURISHING framework. A moderate assessment was achieved in only one policy area which related to limits or removal of specific nutrients in food products (I1). This was the highest assessment achieved.
- 2 Gaps and weaknesses were identified with regards to limits on sugar-sweetened beverage provision in schools and unhealthy food in out-of-education locations (O). Much more needs to be done to reduce exposure of food marketing and advertising to young people particularly in/around schools but also through other means of marketing (R), increasing nutrition education and skills (G), along with strengthening public food procurement policies by implementing further policy actions within this area (H).
- **3** No policy action was identified in nutrition advice and counselling in healthcare settings (N2), therefore, action in this policy area should be prioritised. Greater attention should be given to using financial incentives to increase the availability and affordability of healthy food (U), where a poor assessment also was achieved.

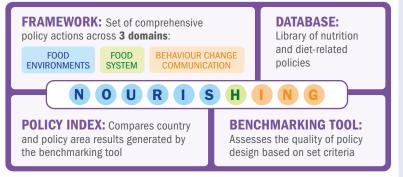

| Overview of policy status   | NO POLICIES IDENTIFIED   | POOR | FAIR | MODERATE | GOOD | EXCELLENT |  |
|---|--|------|------|----------|------|-----------|--|
| N Nutrition label standards and regulations on the use of claims and implied claims on food |  |      |      |          |      | AIR       |  |
| 0 Offer healthy food and set  | FAIR   |      |      |          |      |           |  |
| U Use economic tools to add   | Use economic tools to address food affordability and purchase incentives           |      |      |          |      |           |  |

This snapshot is based on national level policies only. Policies issued by provincial, regional or local governments are outside the scope of this project.

## Methods

The NOURISHING policy index methods are fully explained in the associated **policy brief**. In short, the policy index combines values for a) policy presence, and b) policy design for 41 benchmarks.

The benchmarks are applied to policies in the **NOURISHING database** [2], collected through a comprehensive scan in 30 European countries, including Malta.

Policy tools used to produce the policy index results

Nutrition policy status in Malta

| Break | down of policy index results  | (For full                        | details c                        | on the policy design criteria, consult the <b>policy k</b>   | orief)      |  |  |
|-------|---|----------------------------------|----------------------------------|--|-------------|--|--|
| ×     | No policy identified  | Meets up to 75% of policy design |                                  |  |             |  |  |
|       | Meets up to 25% of policy design  |                                  | Meets up to 99% of policy design |  |             |  |  |
