This country snapshot presents detailed results of the NOURISHING policy index [1] for Croatia. It highlights strengths and weaknesses in the design of national government nutrition policies. This snapshot supplements the policy index results with an in-depth look at the quality of policy design in each country. Full policy index results are outlined in the NOURISHING policy brief, which compares Croatia to 29 other European countries.

Main messages

1. Croatia implements nutrition and diet-related policy actions in eight out of the ten policy areas of the NOURISHING framework. No policy area received higher than a moderate assessment. This assessment was seen in nutrition labelling (N1), food standards in public settings (O), using economic tools to address food affordability and purchase incentives (U), limits or removal of specific nutrients in food products (I1), and increasing public awareness of healthy eating through communication campaigns (I2).

2. There was a lack of sugar-sweetened beverage provisions in schools and of regulations on food availability within the school vicinity which impacted otherwise well-designed standards on school food and food in other out-of-education locations (O). Weaknesses and gaps were seen in public awareness on nutrition (I2), nutrition advice and counselling in schools and primary care settings (N2), and nutrition education (G).

3. Action is needed to improve retail environments (S) and to ensure coherence between food systems and health (H). Further, greater action also needs to be taken to limit marketing of unhealthy food to young people (R), beyond existing regulations on broadcast advertising which also need strengthening.

This snapshot is based on national level policies only. Policies issued by provincial, regional or local governments are outside the scope of this project.

Methods

The NOURISHING policy index methods are fully explained in the associated policy brief. In short, the policy index combines values for a) policy presence, and b) policy design for 41 benchmarks. The benchmarks are applied to policies in the NOURISHING database [2], collected through a comprehensive scan in 30 European countries, including Croatia.
Breakdown of policy index results

No policy identified | Meets up to 25% of policy design criteria | Meets up to 50% of policy design criteria
---|---|---
- Nutrients on back of pack
- Front of pack labels
- Warning labels
- Rules on nutrient claims
- Rules on health claims
- Food and drink available in schools, including restrictions on unhealthy foods
- Measures relating to sugar-sweetened beverage provision in schools
- Fruit and vegetables initiatives in schools
- Food and drink available in immediate vicinity of schools
- Unhealthy food in out-of-education locations
- Health-related food taxes or tariffs
- Income related subsidies or initiatives to increase affordability and accessibility of healthy food
- Targeted subsidies or initiatives to increase affordability and accessibility of healthy food
- Marketing to young people through advertising
- Direct marketing to young people
- Marketing through sponsorship to young people
- Marketing to young people through point of sale measures
- Marketing to young people through product placement and branding
- Marketing to young people through product design and packaging
- Marketing in/or around schools
- Limit or removal of specific nutrients in food products
- Planning restrictions regarding food service outlets around schools
- Planning restrictions on food service outlets
- Initiatives to increase the availability of healthier food in stores and food service outlets
- Measures to support food producers to increase healthy food and decrease unhealthy food in the supply chain
- Measures to support food manufacturers to increase healthy food and decrease unhealthy food in the supply chain
- Measures to support food retailers to increase healthy food and decrease unhealthy food in the supply chain
- Governance structures for multi-sectoral/stakeholder engagement
- Nutrition standards for public procurement
- Supporting urban agriculture in health and planning policies
- Community food production
- Development and communication of food-based dietary guidelines
- Public awareness, mass media and informational campaigns and social marketing on healthy eating
- Nutrition advice and counselling in primary care
- Nutrition advice and counselling in school healthcare setting
- Nutrition education in curricula
- Training for educators
- Training for health professionals
- Cooking skills
- Training in schools in growing food
- Training for caterers

Note: The policy landscape in any country evolves over time. These findings reflect our knowledge as of May 2023.
