Main messages

1. Poland implements policy actions in four out of the six policy areas of the MOVING framework. One policy area received the highest assessment: promoting physical activity in schools, community, and recreation (M), whereas physical activity opportunities in the workplace (O) received a moderate assessment.

2. Greater attention should be given to these policy areas (M, O) as weaknesses were identified in community initiatives and financial incentives to promote physical activity (M) and all areas of physical activity promotion in the workplace and across multiple professions (O). Gaps were further identified in a lack of physical activity in schools (M) alongside public awareness campaigns (N).

3. No action was taken on transport infrastructure to promote active societies (I) and providing training within healthcare and outpatient settings (G). Therefore, these areas should be prioritised. Much more needs to be done to develop structures and surroundings which promote physical activity (V), an area where a poor assessment was achieved.

Overview of policy status

| M | Make opportunities and initiatives that promote physical activity in schools, the community and sport and recreation |
| O | Offer physical activity opportunities in the workplace and training in physical activity promotion across multiple professions |
| V | Visualise and enact structures and surroundings which promote physical activity |
| I | Implement transport infrastructure and opportunities that support active societies |
| N | Normalise and increase physical activity through public communication that motivates and builds behaviour change skills |
| G | Give physical activity training, assessment and counselling in healthcare settings |

This snapshot is based on national level policies only. Policies issued by provincial, regional or local governments are outside the scope of this project.

Methods

The MOVING policy index methods are fully explained in the associated policy brief. In short, the policy index combines values for a) policy presence, and b) policy design for 23 benchmarks.

The benchmarks are applied to policies in the MOVING database [2], collected through a comprehensive scan in 30 European countries, including Poland.
### Physical activity policy status in Poland

#### Breakdown of policy index results
